

CD-5000

Ultra-Thin Color Compensating Filter

PRODUCT DESCRIPTION

HOYA's CD-5000 is being developed as a next generation Ultra-Thin Color Compensating Filter for various imaging applications. At standard thickness of 0.45mm the optical properties of CD-5000 are equivalent to its predecessor C-5000 at 1.2mm thickness.

This filter is ideally suited for CCD applications such as Video Camera and Digital Camera. CD-5000 enhances the color distribution in the visible spectrum while eliminating any UV and near IR transmission.

FEATURES

- ▶ Ultra-Thin
- ▶ High Transmission in the Visible Range
- ▶ Excellent Chemical Durability
- ▶ Matching Transmission to its Predecessor C-5000

APPLICATIONS

- ▶ Video Camera
- ▶ Digital Camera

PRODUCT SPECIFICATIONS

Thermal Properties	Value	Unit	Remarks
▶ Transformation Temperature (T _g)	329	°C	
▶ Sag Temperature (T _s)	365	°C	
▶ Coefficient of Thermal Expansion	170	x 10 ⁻⁷ /°C	100-300°C
Mechanical Properties	Value	Unit	Remarks
▶ Abrasion Factor	440		
▶ Knoop Hardness	440	Kgf/mm ²	
Physical Properties	Value	Unit	Remarks
▶ Specific Gravity	3.27		
▶ Refractive Index (n _d)	1.518		
▶ Abbe-Number (ν _d)	74.6		
Transmission at 0.45mm Thickness	Value	Unit	Specification
▶ 400nm	86.2	%	≥ 85%
▶ 600nm	59.9	%	50% @ 613 +/-10nm
▶ 1200nm	18.8	%	≤ 20%
